

The performance of this tool is situated between classical ice axe and modern technical tool. It combines the advantages of both: curved shaft for large clearance useful in technical terrain and traditional spike that penetrates the snow easily when climbing snow slopes. It is the best choice for steep couloirs and classical alpine terrain.

## **DESCRIPTION**

Head shape is designed so that it can be jammed into the cracks and to provide support for climbing in soft snow, hole in the head is big enough to fit any carabiner.

Pick is aggressive enough for hard ice and moderate mixed climbing and also has a smooth grip zone which protects your gloves when holding the head.

Spike is narrow and penetrates the snow easily, a carabiner or BUNGEE tether may be attached to its eye.
