ID: 03741044

is a manufacturer of personal protective equipment against falls from a height (hereinafter "PPE") and hereby issues this declaration concerning the replacement of the connecting carabiner on EXPERT III or 3D full body harnesses.

The EXPERT III or 3D standard (W0078*) and EXPERT III or 3D speed (W0079*) full body harnesses are supplied with an OXY triple lock carabiner/Ringo connecting the chest and sit parts of the harness. The ASC LINK carabiner (K0128BB07), certified according to EN 362, can also serve the same purpose and can be fitted either with the ASC LINK chest ascender or with the plastic cover supplied with it.

SINGING ROCK s.r.o. declares that the geometry of the above harnesses has not changed since February 2019 and that the ASC LINK carabiner is compatible with these harnesses. Replacing the original connector with the ASC LINK carabiner on harnesses with a date of manufacture of 02/2019 or later therefore has no effect on the conformity of the harness with EN 358, EN 361, EN 813 and EN 1497, and the harness remains in conformity with the type for which the EU type-examination was carried out.

The carabiner is a detachable connector according to EN 362. Its replacement is therefore neither a modification nor a repair of PPE and may be carried out by the user in accordance with the instructions for use of the harness and of the ASC LINK carabiner. In doing so, the user shall observe in particular the following conditions:

- the ASC LINK carabiner must be fitted with the ASC LINK chest ascender or with the supplied plastic cover, both of which hold the chest part of the harness in the correct position;
- the ASC LINK carabiner has its own serial number and must be included in the PPE records and in periodic inspections; the replacement shall be recorded in the inspection record of the harness;
- before each use, the correct closing and locking of the carabiner and its correct orientation in the attachment point must be checked.

This declaration does not apply to harnesses with a date of manufacture before 02/2019, nor to variants certified according to NFPA 2500 or ANSI Z359.11. It does not replace the EU Declaration of Conformity or the instructions for use of the individual products.
